Description

This project is to help people stick to goals work towards projects that they want to accomplish. Often simply making the time to work out, write some code, or practice a language can be the hurdle that prevents people from progressing towards a goal that they want to achieve. This project takes information about their goals and automatically schedules time to work on them and notifies the person when that time comes.

Features

- User Login

- Goal Setting

- Goal Scheduling

- Calendar Sync

- Notifications

Planning - User Stories

User should be able to log into their own account. User should be able to see their schedule by the day, week, and month. User should be able to input goals. User should be able to edit and remove goals.

Planning - Database

- I have not decided on this point yet

- I will need a database of events scheduled and database of users

Technology Stack

- Language - typescript
- Framework - Ionic
- Template engine - Ionic
- Database engine – I am not sure ATM
- Other libraries or components – Schedule API, user login API

Demo

What I Learned

- Ionic Framework
- Typescript/Javascript
- Incorporating API's

What's Next

- Incorporating Drive Times
- Recording successful uses of scheduled time to adjust schedule for goals to increase likelihood of being accomplished
